M&R introduces the Challenger III D automatic textile press with Dynamic PrintStroke, which features programmable squeegee pressure, print/flood speed, print-stroke length, and front or rear carriage stops. These print parameters — along with Ink Dip, Ink Dam, flash cure and other settings — also can be saved as a unique print program in the company's job recall storage and retrieval system.

Laces, the latest appliqué product from Dalco Athletic, combines one-color pro-twill lettering with sports ball lacing. Attached using a zigzag stitch and a decorative bean stitch in a contrasting color for a two-tone effect, the lettering is available in two sizes and six sports: baseball, football, basketball, softball, soccer and volleyball.

Vastex Intl. Inc. introduces the F-1000 flash cure unit. Available in 120- and 204-volt models, it features a 1950-watt, 18" x 18" heater and fixed shields on four sides of the enclosure, allowing closer positioning to the garment and improved edge-to-edge temperature uniformity, according to the company. Additionally, an optional rotary table with two vented steel pallets allows the F-1000 unit to double as a low-cost dryer.
